

OUR FUTURE IS YOUR FUTURE

davison industries pty ltd
AGRICULTURAL & EXPORT CHEMICALS

THE DAVISON PRINCIPLE

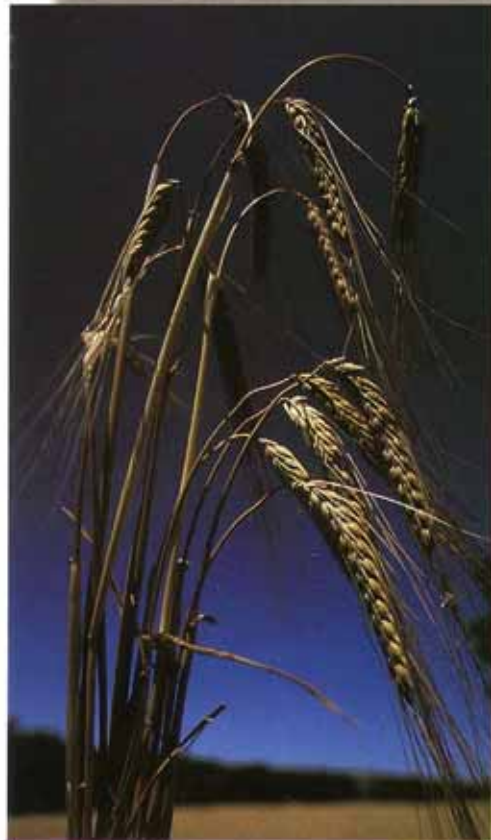

CORRIE DAVISON – Administration Director

Discovering new and better ways to preserve crops and to ensure a healthy environment, is the principle behind Davison Industries.

Founded by a team of highly skilled professionals, using the latest technology, together with the valuable co-operation of Agricultural Farmers, Davison's extensive research continues to produce a range of chemicals second to none.

This is supported by the company's extraordinary sales growth and resolution to remain one-hundred percent Australian owned.

Consolidating the success of their past and in keeping an eye open for the future, Davison Industries continues to meet the real needs of the market, while maintaining an honest and fair business ethos.

RAE DAVISON – Managing Director

Rae is one of Australia's most experienced formulators of Agricultural Chemicals. Teamed with his wife, Corrie Davison, they contribute a concise understanding of the Agricultural Industry, coupled with over 40 years of management and marketing credibility.

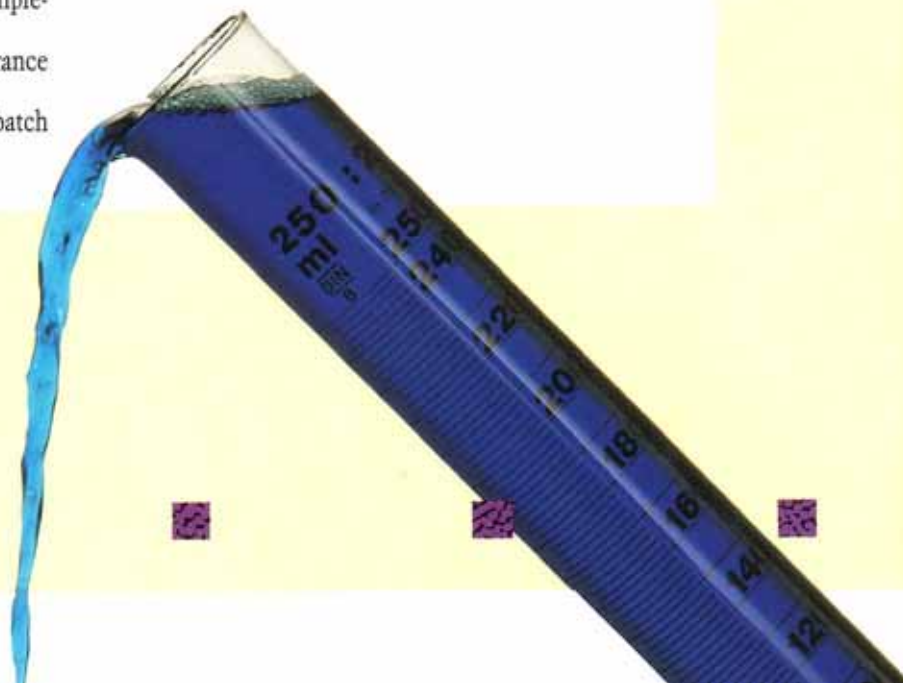

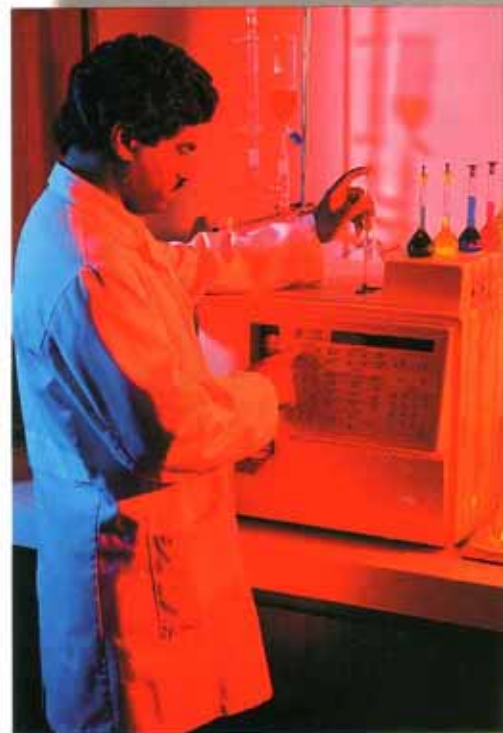

RESEARCH AND OUR DEVELOPMENT

Davison Industries was the first Australian company to successfully synthesize the Glyphosate molecule (the most widely used herbicide in Australia)

Wishing to remain at the forefront of technology, Davison Industries is presently placing major emphasis on low toxicity chemicals, in addition to the research and development of other off-patent agricultural chemicals.

The development and implementation of a stringent 'Quality Assurance Program' guarantees every product batch meets the highest possible standard.

THE PRODUCTIVE EDGE

A highly efficient and unique production technology gives Davison Industries a cost effective edge, enabling the company to penetrate the Australian and Export markets.

Davison Industries' multi-million dollar processing plant ensures the production of high grade chemicals and further has allowed the company to diversify.

Canola Oil and Meal are produced at their crushing plant, a part of Davison Industries' program to ensure continued growth through select diversification.
